

Definition of specialty medications: Specialty medications are generally prescribed for people with complex or ongoing medical conditions such as multiple sclerosis, hemophilia, hepatitis C and rheumatoid arthritis. These high-cost medications also have one or more of the following characteristics: injected or infused, but some may be taken by mouth; unique storage or shipment requirements; additional education and support required from a healthcare professional; and usually not stocked at retail pharmacies.

This list of specialty drugs is updated monthly, and is subject to change without notice. Not all listed specialty drugs may be covered under all plan drug lists (formularies). Please refer to your plan drug list for drug specific coverage information.

Note: Some employer groups may have specific drug coverage requirements for their employees that are not included in the criteria below.

Anticonvulsant
